Embed's smartTouch™ employs a similar architecture to modern Smart Phones by running applications and software that can continue to evolve over time.

smartTOUCH™

3 Year Warranty

We're passionate about our products and we stand behind them with the industry's best warranty. It's standard on the full smartTouch range.

Dedicated Modes for Different Game Types

Set your smartTouch to any of its dedicated modes for Video, Redemption or Coin Action, with or without a token hopper. Easy configuration happens through the on-screen service menu, making setup seamless for the operator while maximizing the guest experience.

Smart Ticket Management & Celebration

For ticket redemption games, smartTouch integrates directly between the game and multiple ticket dispensers, allowing for 100% accuracy, greater operator control and valuable data collection for in-depth game and user reports. You can choose to run exclusively with paper tickets or E-tickets, or offer both options and allow your guests to choose their ticket payout style in real time. We provide the best of both worlds with tools and flexibility to get the most from your redemption games and achieve real operational savings.

Toughened Glass Touchscreen

The touchscreen allows guests to interact with the device in new and meaningful ways, such as checking their balance, multi-credits, accepting special offers and more. The tempered glass panel ensures durability and long life against general wear and tear.

IP Based Hardware

Each device in the smartTouch family comes with enterprise level Wi-Fi or Wired Ethernet connectivity options. Embed's out of the box flexibility allows smartTouch to be deployed in even the strictest security environments.

Flexible Mounting Options

A comprehensive selection of harnesses and mounting bracket options allows for the best reader placement on the game, makes setup a breeze and minimizes installation costs. All smartTouch readers and game harnesses support the Universal Connector Link (UCL).

Touchscreen Service Menu

The smartTouch reader offers a comprehensive internal service menu allowing for easy management, installation and configuration by operational and service staff. These tools to allow for testing and diagnostics of all features that interact with the game. Technicians, game distributors or on-site staff can install and test functions.

Color-Glo™

Embed's award-winning invention (IAAPA Impact Award in 2006) fundamentally changed the debit card industry. Color-Glo is often copied but never equaled, and smartTouch continues this tradition with even more Color-Glo options, features and flexibility. The sales and engagement process is improved by providing your guests with universally understood feedback and recognition.

Playwave® Contactless

All smartTouch readers support Playwave, the benchmark in "Tap" technology. Guests simply place their card, wristband or Playwave-enabled merchandise over the display to start the game. The read time of Playwave media can also be adjusted per reader to prevent over-crediting games.

Playwave - don't accept substitutes.
