

SYNtouch RADAR supporting game developed by FikirbazZenger, Turkey

SYNtouch RADAR supporting VENTUZ Professional Presenter Application

SYNtouch RADAR supporting VENTUZ Professional Presenter Application

project: syntropy (Germany - Sweden - PR China - Singapore) creates technologies and solutions for professional simulation- and training environments, interactive, immersive media based attractions as well as multimedia experiences.

SYNtouch RADAR

SYNtouch RADAR turns ANY non-interactive projection system into an interactive attraction just by adding one or more industry-grade LASER sensors and running our SYNtouch RADAR calibration software. It does not matter if you have a rear or front projection, a flat screen, LCD- or LED-wall, a media facade (using LASER sensors) or even a hemispheric or dome projection (using IR camera tracking sensors): SYNtouch RADAR software calibrates the projection surface so that you can immediately explore (multitouch-) interactivity on the big screen.

Unlimited screen size and unlimited touch points with SYNtouch RADAR

The size / resolution of your interactive projection does not matter: simply add additional sensors if you need them. Running SYNtouch RADAR allows you to easily calibrate as many sensors as you need and to merge them into one big desktop ready for multi-user interaction.

The system is touchless and supports single-, dual- or even multitouch interaction, thus allowing the use of natural gestures in your application. The range finder LASER sensors are not irritated by sunlight or infrared light and can be used in outdoor situations.

Make ANY application interactive on your touchless screen - indoors or outdoors!

SYNtouch RADAR gives you full flexibility to run ANY application which is controlled by mouse or multitouch input: from standard office presentation softwares like Powerpoint or Keynote, to Flash/Web-applications and dedicated multitouch multi-user applications.

SYNtouch RADAR runs on Windows7, 8.x, and 10 but can run on a separate PC and on Apple OS-X when using TUIO-protocol, thus it enables any possible interactive end application.

project:syntropy

SYNtouch RADAR offers total hardware and software flexibility!

We designed SYNtouch RADAR to be the most flexible calibration tool for LASER- and IR-sensors on the market.

SYNtouch RADAR therefore offers limitless possibilities for planners and designers of interactive installations: By supporting a wide range of LASER- and camera-based tracking sensors we provide the total freedom of interaction in 2 (or even 3) axis as well as software support for the most powerful production suites for multi-display installations.

We are able to customize software interfaces and protocols according to different needs. Several production software and interaction protocols are already implemented, others can be integrated upon request.

Supported Hard- and Software

- Select from a great variety of industry-grade LASER sensors for in- and outdoor scenarios
- Microsoft® Xbox One KINECT sensor calibration support which allows for interaction in 3 dimensions
- Indefinite number of sensors can be added for seamless big interactive surfaces
- Multiple SYNtouch RADAR licenses can either be used to support one big surface or for many unique installations
- Multi-User interaction (TUIO)
- Multi-Touch gestures (TUIO, Windows®)
- Windows® mouse 3-point support (left/right/middle/scroll)
- Ventuz Professional Presenter support
- Apple OS-X support using TUIO

Markets and Applications

- Digital Signage
- Shops, Storefronts, Shop Windows, PoI
- Showrooms (Configurators, Sales Tools)
- Trade Shows
- Visitor Centers
- Hotels (Tourist Information Systems, City Maps)
- Bars and Restaurants (Entertainment, Games)
- Concerts, Events, Theatre
- Museums and Exhibitions
- Science Centers (Interactive Exhibits)
- Control Rooms
- Conference Rooms / Videoconferencing
- TV-Studios (News, Sports, Science Shows).

Pricing*

- SYNtouch RADAR software license 1,998.00 EUR
 - SYNtouch RADAR training day** 1,498.00 EUR
- ** Sensors and Software available on-site Magdeburg

List of supported LASER range-finder sensors

- Leuze ROD4-08plus (Ethernet) price upon req.
- Hokuyo UTM-30LX (USB) price upon req.
- Hokuyo UBG-04LX-F01 (USB) price upon req.
- Hokuyo UST-10LX (Ethernet) price upon req.
- Hokuyo URG-04LX (USB) price upon req.

* EXW Magdeburg (Incoterms 2010), October 2017, technical errors and modifications reserved.
